

Estimating the Undiagnosed Fraction:

Disseminating the “Testing History” Method

Jeanette Birnbaum

presenting on behalf of
Martina Morris, Ian Fellows and Matt Golden

Overview

The Method

- Summary and assumptions
- KC & WA state analyses

Dissemination

- Prototype “Rshiny” web app

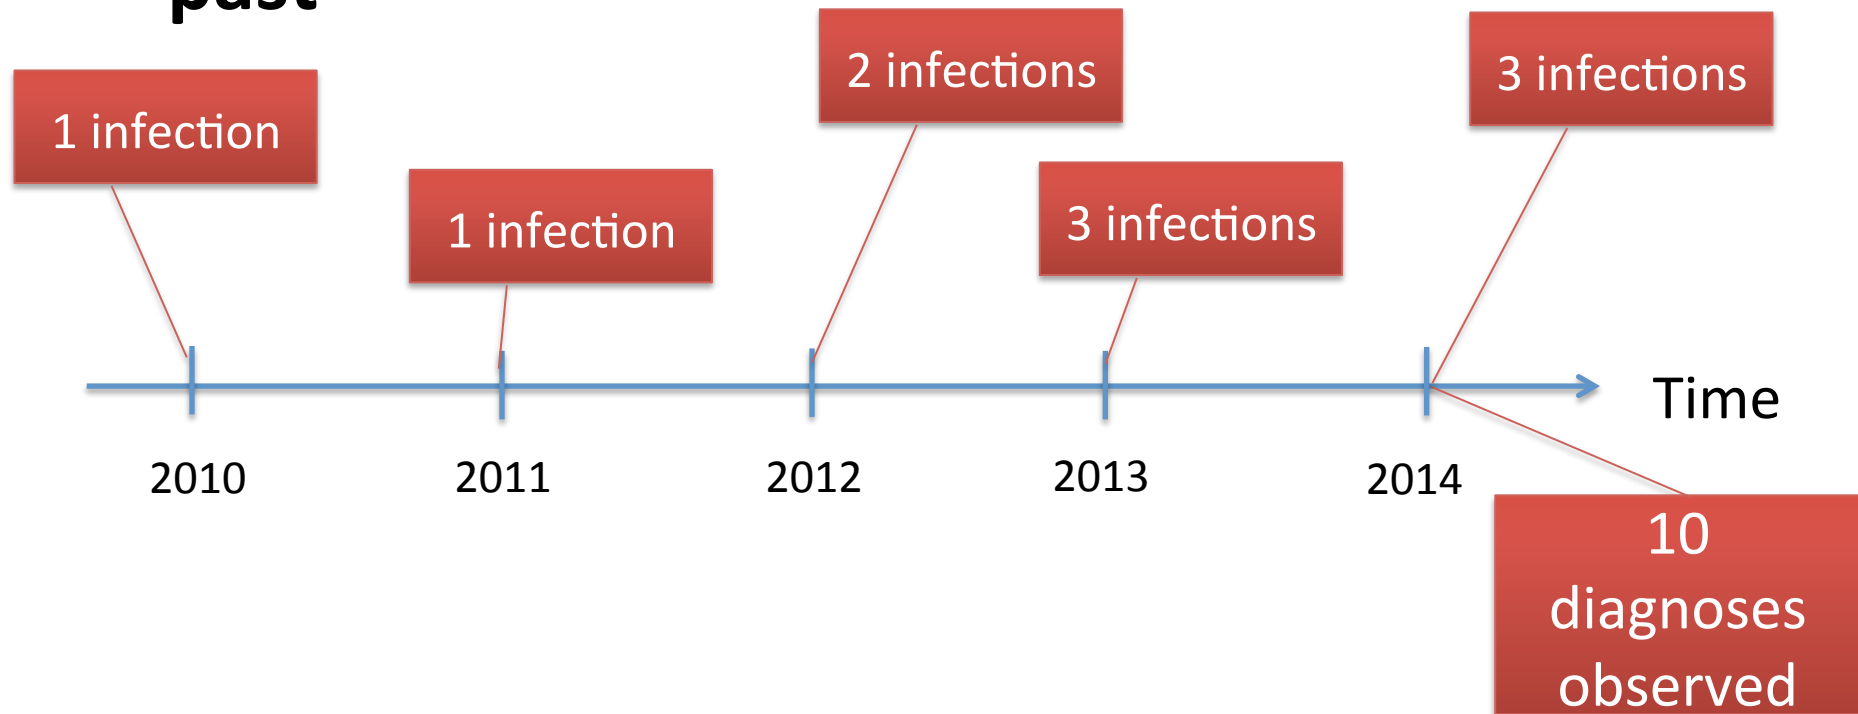

Your Feedback

- Refining the method
- Working with stakeholders

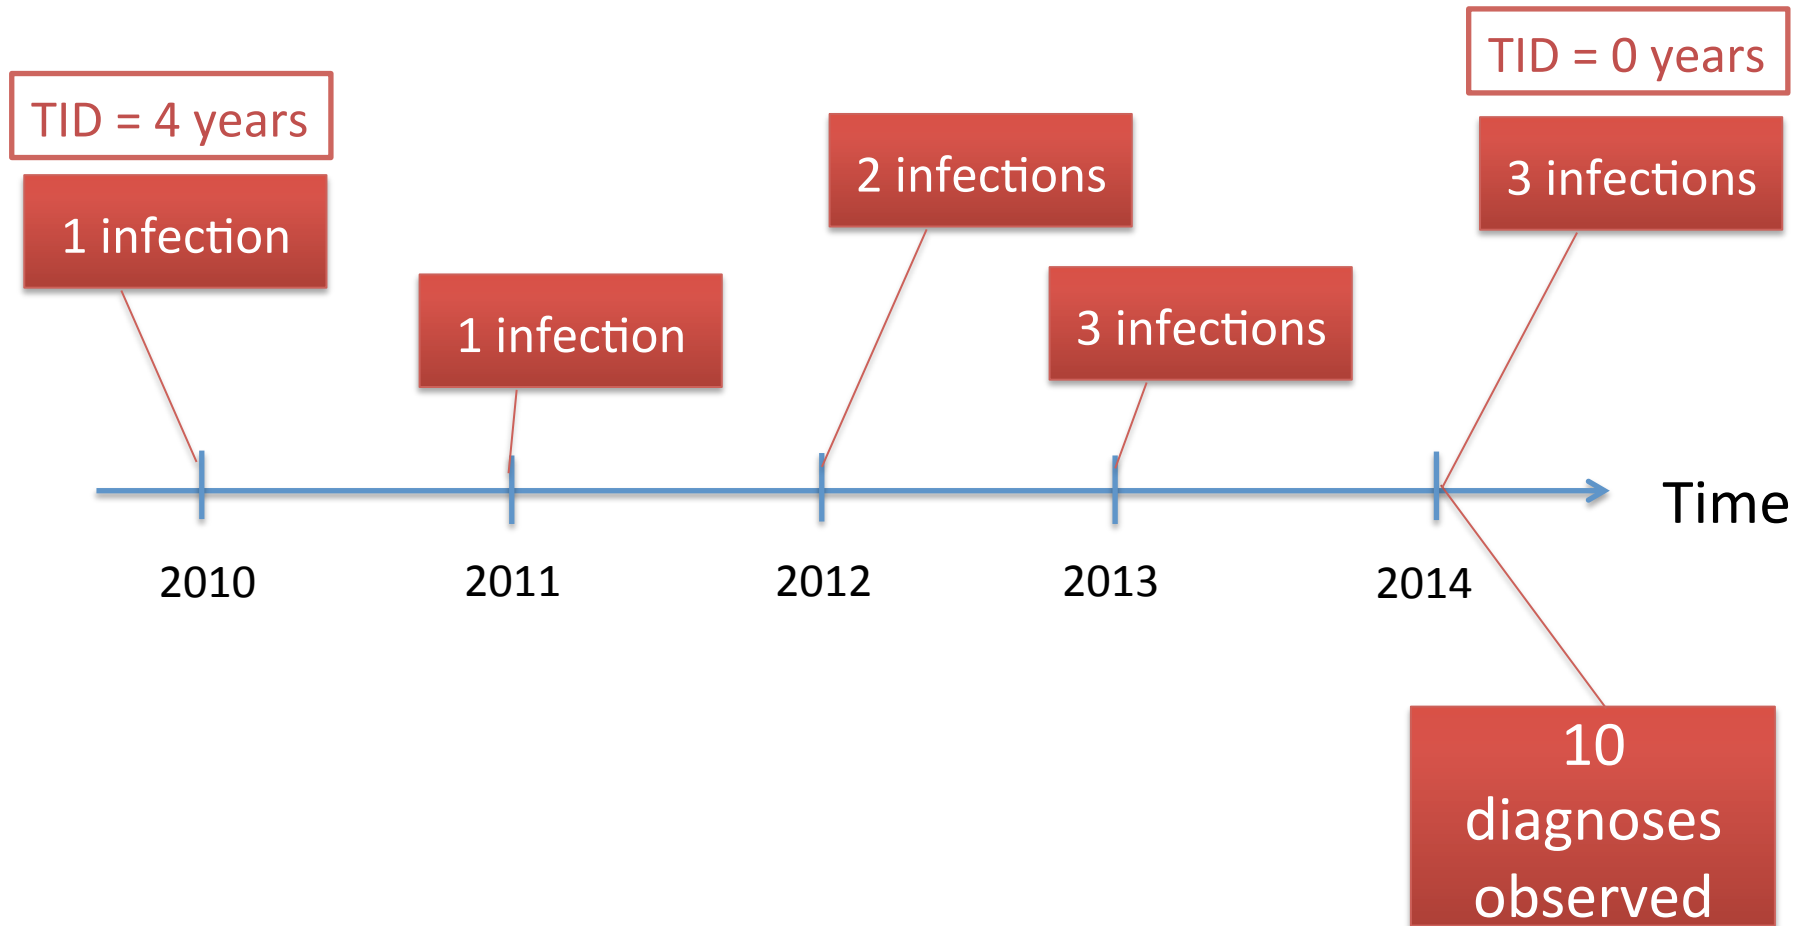

The Testing History Method

Approach: Backcalculation

- New diagnoses **today**...
- ...are based on infections that occurred in the **past**

Time from Infection to Diagnosis (TID)

Backcalculation's 3 Components

OBSERVED

Cases diagnosed at T =

BACKCALCULATE

Sum of (Incidence at X yrs ago *

TID probability for X yrs ago)

NEED AN ESTIMATE

TID from Testing History

Infection window = [Date of last negative test -> Date of diagnosis]

1) Get date of last negative test

2) Determine time of infection within the infection window

Impact of TID Assumptions on TID

DATA INCLUSION

TIME OF INFECTION

TID DISTRIBUTION

OBSERVED ONLY

Density of last negative tests

UNIFORM

infections

“BASE CASE”

% undiagnosed

AT LAST NEG TEST

infections

“WORST CASE (OBS)”

% undiagnosed

DATA INCLUSION

TIME OF INFECTION

TID DISTRIBUTION

OBSERVED ONLY

Density of last negative tests

UNIFORM

infections

"BASE CASE"

% undiagnosed

AT LAST NEG TEST

infections

"WORST CASE (OBS)"

% undiagnosed

INCLUDING MISSING

Density of last negative tests

AT LAST NEG TEST

infections

"WORST CASE (MISS)"

% undiagnosed

Applications to KC and WA State

KC MSM: Incidence \sim Constant

15% missing testing history

KC MSM: Undiagnosed Varies by Race

WA: Incidence is Declining

MSM

35%
missing

Hetero

60%
missing

White

40%
missing

Black

49%
missing

Hispanic

48%
missing

WA: Undiagnosed *Counts* by Group

Hetero vs MSM

Race

● Base Case ■ Worst Case (Obs) ▲ Worst Case (Miss)

Dissemination to Public Health Departments

Web Portal

- **Goals:**
 - Provide self-guided access to model for local use
 - Minimal learning curve
 - Minimal pre-processing of data
 - Outputs presented in most policy-relevant form
- **Mechanism**
 - “Rshiny” interface

Protoype Rshiny App

[https://hivbackcalc.shinyapps.io/
HIVBackCalc App/](https://hivbackcalc.shinyapps.io/HIVBackCalc_App/)

Your Feedback

Issues

- Data privacy requirements
 - Local, protected upload, unprotected upload
- Detail in outputs
 - Race, mode, sex subgroup results?
 - Impact of missing data (suggestions for better assumptions?)
- Training for users

Thank you!

Impact of TID Assumptions

DATA INCLUSION	TIME OF INFECTION	TID DISTRIBUTION

DATA INCLUSION	TIME OF INFECTION	TID DISTRIBUTION
